Ramp Logistics - Shopify Integration App

Automate the fulfillment process between Ramp Logistics and Shopify

The Ramp Logistics - Shopify Integration App (IA) is a pre-built integration solution automating the inventory management, warehousing and fulfillment processes between Ramp Logistics, a leading supply chain & third party logistics (3PL) provider and Shopify, a leading eCommerce platform.

Integration App Highlights

Connect two endpoints via stand-alone SaaS products - Integration Apps. Enable a hands-on and front seat view of the connection between two endpoints to better manage your integration and scale alongside your business as it grows.

Powered by Celigo's iPasS platform - integrator.IO, integration management is more hands-on with direct access into settings and configuration.
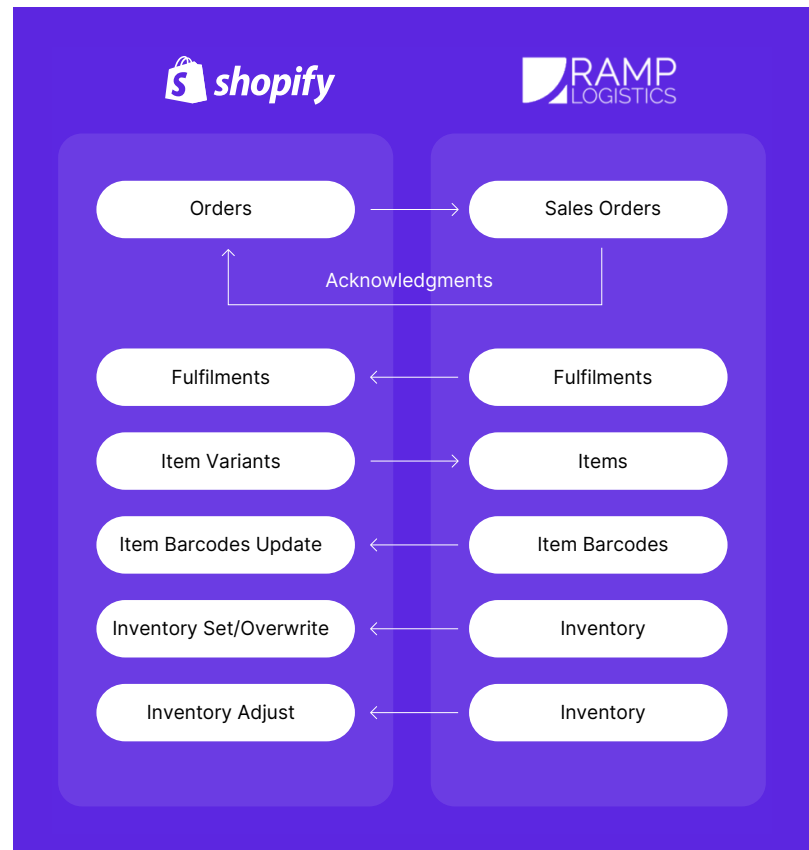

Error management - by way of an intuitive error monitoring dashboard, gain direct visibility into each datasync.

Business evolution - the world of ecommerce never stops revolving, therefore your business will continue evolving. Find the perfect fit for your business whether you use the pre-built integration, or build a custom fit connection.

Nourish customer growth and retention as you streamline the fulfillment process, even during peak seasons!
